

Music Term 3 - Week 2

Grade 1 & 2

SOUND!

Damian.OBree@hestalbanssth.catholic.edu.au

This term, we are going to learn about different types of sounds and how to make music using those different types of sound!

This week, you will be doing activities that ask you to find different objects to make different sounds. We are going to be musical scientists and experiment with sound!

1. Find 5 **different** materials around the house. (plastic, metal... whatever you like)
2. Play these rhythm patterns using the different materials.

Make up your own rhythm patterns using each material.

3. Tell me about the sound of each material. Is it rough? smooth? sharp? soft? hard? You tell me a word for each one in the next column. You can choose your own word. Colour in the one that you thought was the best. ***(Print out and write on this sheet or write it on another piece of paper)***
